Projects

Github Profiles Application <ul style="list-style-type: none">At its core, it begins by defining the base API URL for GitHub users and selects essential HTML elements like the form and main display area. The function 'fetchUsers' takes a username as an argument, retrieves the user's data, and constructs a user card that contains their avatar, bio, and statistics such as followers and repositories. The 'getRepos' function complements this by fetching the user's repositories .Tools Used: HTML, CSS, JavaScript	https://polishetwarsravani.github.io/Github-Profiles-App/
